

Yassine RACHIDY

PhD Candidate | LLM Alignment

✉ yassine.rachidy@um6p.ma | [in yassine-rachidy](#) | [github yrachidy](#) | 📍 Rabat, Morocco

ABOUT

PhD candidate at UM6P working on LLM safety and alignment. Currently focusing on mechanistic interpretability of LLM safety mechanisms and on translating those insights into more reliable defenses.

EDUCATION

PhD Candidate

AI Movement, University Mohammed VI Polytechnic (UM6P)

2024 – Present

Rabat, Morocco

- Supervised by Prof. Amal El Fallah Seghrouchni and Dr. Youssef Hmamouche
- Research Focus: LLM Safety, Alignment, and Mechanistic Interpretability.

Pre-doctoral Student

AI Movement, University Mohammed VI Polytechnic (UM6P)

2023 – 2024

Rabat, Morocco

MEng in Data & Software Engineering

National Institute of Statistics and Applied Economics (INSEA)

Graduated 2023

Rabat, Morocco

PUBLICATIONS

Strategic Deflection: Defending LLMs from Logit Manipulation

2026

Computational Linguistics

- Introduced a novel defense mechanism against jailbreaking attacks that strategically redirects harmful queries when refusals fail, demonstrating significant reduction in Attack Success Rate (ASR) while maintaining performance on benign tasks.
- Mechanistically characterized the defense via token-level entropy dynamics and latent trajectory probing, confirming deflection operates representationally rather than through surface-level lexical patterns.

Domain Adaptive Document Reranking for Retrieval Augmented Generation

2025

37th International Conference on Tools with Artificial Intelligence (ICTAI)

- Engineered a novel Mixture of Experts (MoE) reranker architecture to efficiently handle multi-domain adaptability, achieving superior performance over LLM-based and commercial models without the cost of deploying multiple specialized models.

SKILLS

Languages

English (Professional), French (Professional), Arabic (Native)

Technical Skills

LLM Safety & Alignment (preference optimization, adversarial robustness, jailbreak attack design and evaluation) · Mechanistic Interpretability (sparse autoencoders, causal intervention, linear probing, residual stream analysis) · ML Engineering.
